

Corrigendum to: *Thysanoplusia orichalcea* (FABRICIUS, 1775) (Lepidoptera, Noctuidae, Plusiinae) found again in Romania after more than 150 years

Levente SZÉKELY & Vlad DINCĂ

A recent study documenting a new record of *Thysanoplusia orichalcea* (FABRICIUS, 1775) from south-eastern Romania (SZÉKELY and DINCĂ 2020) mentioned that this species was not recorded from northern Dobrogea by MANN (1866).

However, although *T. orichalcea* is not listed in the main systematic list of MANN (1866), on the last page of the publication (page 360), the species is mentioned as “*Plusia orichalcea* F.”. Mann mentioned that this species, together with a few others, was identified by him based on material provided by Malinovsky, who collected Lepidoptera in the surroundings of Tulcea.

Therefore, previous references (e.g. RÁKOSY *et al.* 2003) to the study of MANN (1866) with regard to *T. orichalcea* in Romania, are correct.

Although not extensive, the material collected by Malinovsky also includes other species that are uncommon in Dobrogea and/or Romania, such as *Ocnogyna parasita* (HÜBNER, 1790), *Diachrysia zosimi* (HÜBNER, 1822), *Schinia cardui* (HÜBNER, 1790), *Lycia zonaria* ([DENIS & SCHIFFERMÜLLER], 1775) etc. (MANN 1866).

Below we provide an updated map with records of *T. orichalcea* from Romania (Fig. 1).

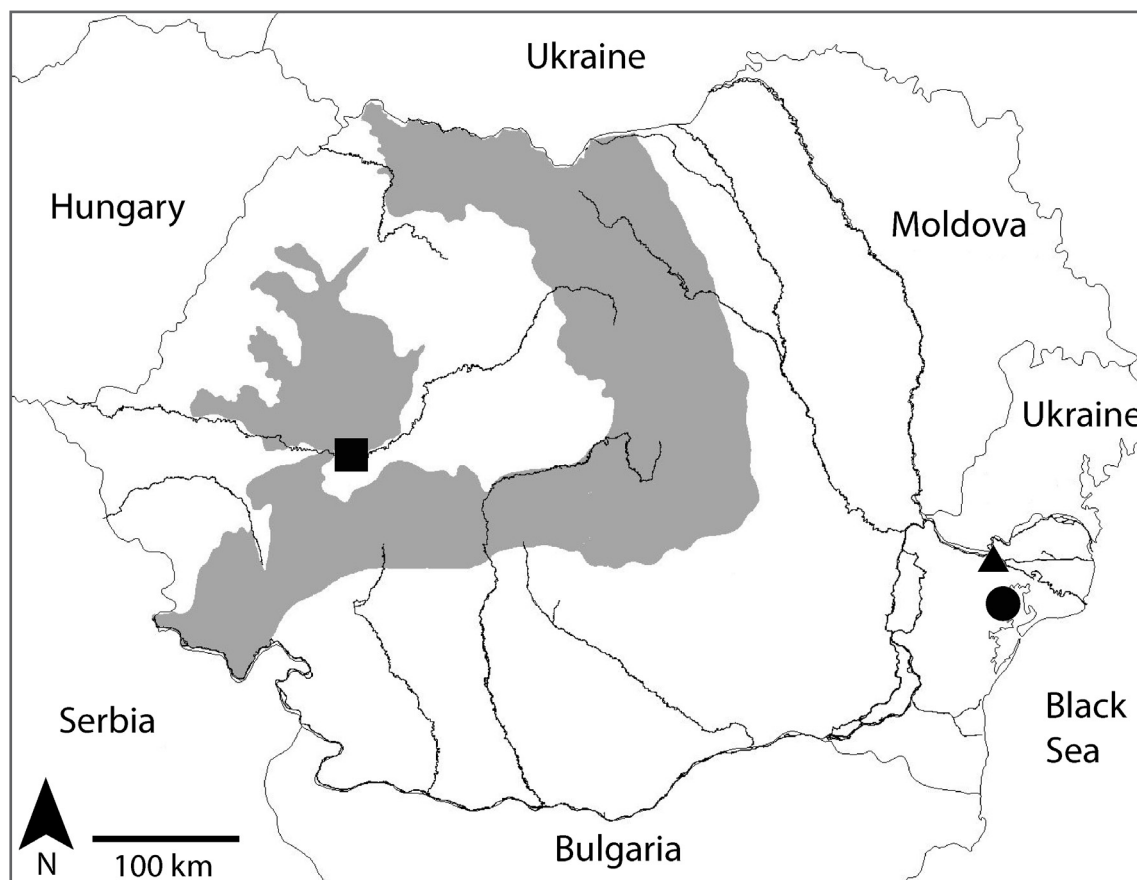

Fig. 1. Records of *Thysanoplusia orichalcea* in Romania. Black square: nineteenth century record from Săcărâmb, Hunedoara county (FUSS 1850); black triangle: nineteenth century record from the surroundings of Tulcea, Tulcea county (MANN 1866); black dot: record from Enisala Fortress, Tulcea county (24.VII.2020) (SZÉKELY and DINCĂ 2020).
